Contribution Table

Certacito.ai · A4 Prototype Presentation appendix

Project Certacito.ai, AI agent governance platform

Document contribution-table.md

Date 07 August 2026

Live system <http://20.92.93.30>

Approval

Has the presentation and system been approved by the supervisor/client?	YES
Supervisor	Dr John Le
Client / sponsor	Anthony Autore
Confirmed	Prior to A4 submission, 07 August 2026

Build contributions (A4 phase)

Accountability areas follow the split agreed with the supervisor (June email).

MEMBER	ACCOUNTABILITY AREA	A4 CONTRIBUTION (CONFIRMED)	SIGN
Nico	Overall coordination, core architecture, semantic security	Infrastructure + deployment, backend hardening (RBAC), semantic guard logic, frontend dashboard skeleton	N.V.
Daniel	Backend logic, database models, system behaviour	Postgres/SQLAlchemy models, risk classifier, rate limiting, agent registry CRUD, audit verification	D.T.
Sai	Testing, rule configuration, live monitoring	Policy rules config, WS dashboard charts (recharts), automated test suite for engines	S.M.
Allan	Immutability, human-in-the-loop flows, UI refinement	SHA-256 audit log chaining, approval queue, policy engine conditions, frontend settings and reports screens	A.J.

Research and planning contributions (A1-A2 phase)

Group 28 has six members. The four above carried the A4 build; the two below did the research and planning the build was specified from. Their areas are as recorded in the A2 report contribution table, and the requirements they wrote are the ones the RTM traces against.

MEMBER	ACCOUNTABILITY AREA	CONTRIBUTION
Peter	Security and compliance	Security and compliance requirements, policy engine documentation, non-functional requirements, Commonwealth privacy regulation research
Roland	Branding and presentation, tools	Branding section and style direction, document formatting and colour consistency, glossary, appendices, conclusion, tools selection, local development and repository structure, branching strategy

Splitting the table this way rather than merging the two groups is deliberate.

It shows who wrote which part of the system honestly, without dropping members who contributed earlier in the project.

Presentation delivery: Nico presents. The A4 marking sheet scores presentation structure and content, not how the speaking is divided up.

Final Sprint (July 25 - August 7)

Note: Following the finalization of this table, Nico completed a solo final sprint to wrap up the remaining architectural work before submission. This included implementing the condition parser (recursive-descent tokenizer and 3-valued logic), migrating to bcrypt, implementing the Redis rate limiter, configuring Caddy TLS, proxy-header hardening, and scaffold cleanup.
